

step2

先把controllers中的midproj設立好
(先把內容連結的檔案先確認是否有連結到)

servicemidprojCrown2Controller_76

servicemidprojCrown2Controller_76

```

controllers > midproj_76 > JS midprojController_76.js > ...
1  const servicemidprojCrown2Controller_76 = require('./servicemidprojCrown2Controller_76');
2
3  exports.getCategories = async (req, res) => {
4    try {
5      let results = await servicemidprojCrown2Controller_76.getCategories();
6      console.log('results', JSON.stringify(results));
7      res.render('midproh_76', {
8        data: results,
9        title: 'midproj_76',
10       name: 'DORIS HSIEH',
11       id: `207410076`,
12     });
13   } catch (err) {
14     console.log('midprojcrow2Controller getCategories', err);
15   }
16 };
17

```

apiCrown2Controller_76(有新增了一行，是設立getmovie)

```

1101-DB-MIDPROJ-76  bin  controllers  crown_76  JS crown2Controller_76.js  U  JS serviceCrown2Controller_76.js  U  finalproj_76  midproj_76  JS midprojController_76.js  U  JS servicemidprojCrown2Contr...  U  JS apiCrown2Controller_76.js  U
22
23
24  exports.getmovie=async (req ,res) =>{
25    try {
26      const data = await servicemidprojCrown2Controller_76.getmovie();
27      return res.json(data);
28    }catch (err){
29      res.status(404).json(err);
30    }
31  }
32
33
34  exports.getProductsByCategory =async(req,res) =>{

```
